

Dhwani Manishkumar Chauhan

Graduation: May 2026 — OPT US Work Authorization (Valid until June 2029)
dchauha@gmu.edu — 202 494 8847 — LinkedIn — Portfolio

Education

Master of Science in Computer Science

George Mason University — GPA: 3.8/4.0 May 2026

Post Graduate Diploma in Computer Applications

The Maharaja Sayajirao University of Baroda — GPA: 4.0/4.0 May 2024

Bachelor's in Computer Applications

The Maharaja Sayajirao University of Baroda — GPA: 3.3/4.0 May 2023

Skills

Programming Languages: Kotlin, Java, Python, C++, JavaScript

Mobile Development: Android (Kotlin, Java), Android Studio, Flutter, React Native, Mobile UI Development, REST API Integration, Asynchronous Programming

Android Fundamentals: Activity Lifecycle, Runtime Permissions, Location Services (GPS), Networking, Data Persistence, UI Layouts, Theming

Backend & APIs: Spring Boot, FastAPI, RESTful Web Services, Secure API Design, Object-Oriented Architecture

Databases: MySQL, PostgreSQL, Data Modeling, Structured Data Handling

Tools & Dev Practices: Git, Gradle, CI/CD (Jenkins), Unit Testing, Integration Testing, Code Reviews

Cloud & Deployment: AWS (EC2, RDS, S3), Docker, Kubernetes

Experience

Graduate Teaching Assistant – Web Development & Multimedia - George Mason University Present

- Mentored and supported **200+** students in **HTML5, CSS3, JavaScript, and responsive interface development**, reinforcing structured programming, debugging techniques, and adherence to **software human interface standards**.
- Conducted hands-on lab sessions in **web design and multimedia development** using **Adobe Dreamweaver, Photoshop, and Animate**, guiding students in building structured, visually appealing web interfaces and interactive content, improving lab completion rates by **25%**.
- Provided technical support for web-based assignments and networking labs, assisting students in troubleshooting front-end rendering issues, validating requirements, and strengthening technical communication, improving performance consistency by **20%**.

Mobile Application Developer Intern - Cutting Edge Infotech Jun 2023

- Designed and developed **Android application features** using **Kotlin and Java**, implementing **clean, testable code, Android architecture patterns (MVVM)**, and modular components to improve **feature stability** and long-term **maintainability**.
- Built and integrated **RESTful APIs**, implemented **networking, asynchronous data handling, and local data persistence**, and optimized **UI rendering performance**, reducing response latency by **25%** and improving overall **application responsiveness**.
- Collaborated with **cross-functional teams** in an **Agile environment**, contributed to **code reviews**, debugged **production issues**, and resolved **UI and functional defects**, reducing bugs by **30%** and improving **user experience**.

Projects

Cupid — Cross-Platform Social Application with AI Chatbot (React Native) Feb 2026

- Built a mobile application in **Android Studio using React Native**, implementing responsive UI components, gesture-based navigation, and structured state management to deliver a scalable and maintainable Android experience.
- Integrated **Google Gemini API** to develop an in-app AI chatbot, handling asynchronous API calls, secure request management, and real-time response rendering to enhance user engagement and intelligent interaction within the platform.

Shutter Share — Event-Based Media Sharing Application (Flutter) Mar 2025

- Developed an Android application using **Flutter in Android Studio** enabling QR-based event access and secure media uploads, supporting **500+ images per event** with reliable cloud-based storage integration.
- Implemented secure authentication, optimized image upload/download workflows, and improved network efficiency and data persistence mechanisms, ensuring scalable performance across distributed users.

Location-Based Quiz Application (Android) May 2023

- Developed an Android application implementing **location-based access control**, allowing students to attempt quizzes only within a defined geographic radius using device GPS and runtime permission handling.
- Designed role-based functionality enabling professors to create and manage multiple quizzes, implementing structured data handling, input validation, and controlled user flows to ensure secure and reliable quiz delivery.

Research Experience

AI-Accelerated Software Engineering (DocuMind) Sept 2025 – Dec 2025

George Mason University – Prof. Thomas LaToza

- Architected and implemented a scalable **Python-based backend system** to analyze multi-language code repositories (1,000+ lines), generating structured technical documentation and improving developer onboarding efficiency by **40%**.
- Designed modular, testable data processing pipelines using **object-oriented architecture and concurrent execution**, improving system performance and reliability by **35%** while ensuring maintainable and extensible code structure.
